Art Unit: 2829

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Erickson (Pat # 5,436,557).

As to claims 16-19, Erickson discloses in figure 1 a current sensor having a printed circuit board (14) with an edge portion and a slot for an elongated conductor extending therethrough, a Hall magnetic field transducer (24) mounted to a surface of the board (14) and a magnetic body (20) disposed adjacent to the transducer (24).

4. Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

It is unclear from the specification how “a control circuit (46)” is used for controlling the current flow in the power semiconductor device(20). If there is no feed back signal from the control circuit (46) connected to the power semiconductor device (20), how can the current flow

in semiconductor device is controlled.

The dependent claims not specifically address share the same indefiniteness as they depend from rejected base claims.

5. Since claims 1-15 are indefinite, no art has been applied to these instant claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Needham et al (Pat # 5,570,034) disclose a method and apparatus for sensing quiescent current in a CMOS integrated circuit.

Heberle (Pat # 5,399,965) discloses floating data interface.

Olsen (Pat # 5,450,000) disclose a current controller for controlling an input current carried by a primary conductor.

Haensgen et al (Pat 6,426,617) disclose a Hall effect current sensor system packaging.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to VINH P. NGUYEN whose telephone number is (703) 305-4914.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-4900.
